

**ibuyer.hk**

CostingNet creates a detail costing sheet for your product. It is best for garment, clothing, apparel, home textiles, footwear, socks, necktie, bags, luggage, sporting goods in soft line industry.

**Core Value** – it centralized all the costing sheet of your merchandising department and providing a system for all merchandiser. Standardize the costing element inputting to the database, and most important, create comparison report for all cost element by the system. It compares raw material cost, trim cost, labor cost, subcontract cost and transportation cost. In this connection, it finds out the cheapest from those cost elements, helping your company to improve gross profit. Similarly, the quote comparison report also find out the highest margin customer, thus your company may focus on those profitable customer and end up with higher margin order being placed.

**Difficulties with conventional costing method** – merchandiser is using excel worksheet to calculate product costing, it would be fine but without the check point on average price and comparison. It will come out with a lot of versions, copies and various format of costing sheet. Making it so difficult to create comparison reports base on those individual excel file, hence no comparison or average cost checking being made during costing. It also creates misunderstanding, confusion due to too many versions and various format of costing sheet being made by each merchandiser. Not to mention losing of vital information due to change of merchandiser.

CostingNet is definitely a solution for above problem – it uses database to keep the vital information and can generate any comparison report instantly. It gathered all cost sheet made by individual merchandiser in the same standard. Within split second, the average price and compare report will list out the cheapest cost of all for management review. It is important for cost control and work out the best price point for quotation, in this connections, it makes your product become most competitive in the market.

**Unique features** – it is the only hand on costing software with multi user database capability, the cheapest, most stable and zero maintenance software in the world. Dual currency summary with ex-work, FOB, C&F, CIF, Landed, LDP and retail price calculation features available.

We hope this product can help your company in cost control, improve profit margin and overcome the serious inflation problem.
